## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1-4 is rejected under 35 U.S.C. 103(a) as being unpatentable over

Ohshita(6028383) in view of Anderson(3735168).

Ohshita substantially disclose the claim invention, however Ohshita does not disclose the stator coils impregnated with liquid resin and the free ends of the coil wrap around the plurality of terminals.

Anderson teaches in fig.1 an electro-dynamic machine comprising: insulating stator coils impregnated with liquid resin for the purpose of insulating the coils. Therefore it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the resolver stator of Ohshita with teaching Anderson insulating coils for the purpose of improving insulation.

3. Claims 5-9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ohshita in view of Anderson as applied to claims 1-4 above, and further in view of Fukaya (5057732). As seen above in paragrah 2 Ohshita disclose substantially the claim invention and Anderson discloses the stator coils impregnated with insulating resin. However neither Ohshita nor Fukaya disclose the coils wound around plurality of terminals at least one.

4. Funkaya disclose in fig. 1-2 an electric motor comprising a stator( 2) having coils wrapped around a plurality of terminals(3a-b) for the purpose of supply current to motor. Therefore it would have been obvious to one having ordinary skill in the arts at the time the invention was made to modify the resolver of Ohshita with the teaching of Anderson and Fukaya for the purpose of improving insulation of the motor and providing a simple constitution for connecting the free ends of the coils to a terminal.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karen B Addison whose telephone number is 703-306-5855. The examiner can normally be reached on 8:00 to 4:30.
